

## Moving Forward

---

**Springfield, Mo April 2009** – U-Link LLC is excited to announce the new sponsorship service that will expand the CU Transit WiFi project to all city buses and beyond! This ambitious use of mobile technologies will make Springfield one of the first internet connected transit networks in the nation!

Users of The Commuters Connection internet access can log-on at any of the existing bus, hot-spot or home networks and access <http://thecommutersconnection.com>. Once there, a list of participating sponsors can be viewed. The information presented by that sponsor can then be sent to your mobile phone and used for discounts, special offers or additional products and services easily and quickly at local Springfield businesses.

For sponsors, there is now an inexpensive and innovative way to promote public transit use within our community and obtain new customers. \$270 will get a sponsor on The Commuters Connection network for a six (6) month period. And, with every four (4) sponsors, U-Link LLC can add and support another mobile WiFi connection for six (6) months. With 25 coaches in the transit fleet, Springfield can provide Internet access to all transit users with under 100 sponsor placements! Where other transit systems have paid for such access, Springfield can be the nations first sponsor supported mobile transit WiFi network.

### **About U-Link LLC**

U-Link LLC is a 3 year old wireless technology company specializing in the design, deployment and management of public, private and enterprise level wireless internet networks. Originating in Ozark Missouri, U-Link LLC is the brainchild of local entrepreneur, Matthew Thomas. A graduate of Missouri State University, Matthew has designed and developed U-Link LLC to be a profitable and growing entity with a strong focus on the current and future developments of the wireless industry.

### **About The Commuters Connection**

The Commuters Connection.com is designed to be a social aggregation site for all discussions relating to standard and alternative commuting technologies. Web users can join and submit their knowledge on new social, political and technological trends all relating to getting from point A to Point B. The Commuters Connection is also the landing site for the Springfield CU Transit WiFi Project.
